

Zipho Innocent Lunika's memory course

Appendix: Major System 1000 number-image pairs

Some special rules for 3-digit numbers:

In some cases, numbering ending in 67 may use the "suffix" ING. Example 867 = fishing; 767 = catching, etc.

You may also use the first 3 major system letters of a word in other cases. As you construct your own major system and borrow from some of my ideas, you may implement exceptions of your own.

Some online resource to help you construct your own image pegs for your system:

Numzi can be very useful for coming up with major system words or turning words into numbers:
